

Station 281 Stefini Ressi

Temporary closed due to maintenances

Realtime data

Real time data is available in the GBFS format (General Bikeshare Feed Specification). [More details are available on GitHub](#). The data is updated every 10 seconds.

The data is published under the [Norwegian Licence for Open Government Data \(NLOD\) 2.0](#)

Identification in header

All requests to our real time API should send the `Client-Identifier` header. This should contain a value that describes the application accessing the API. The value should contain your company/organization name, followed by a dash and the application's name, like `mycompany-travelplanner` or `myname-citymonitor`.

Endpoints

Auto discovery

Auto-discovery file that links to all of the other files published by the system.

Endpoint: [gbfs.json](#) ([Documentation](#))

CURL request

```
curl -H "Client-Identifier: IDENTIFIER" https://gbfs.urbansharing.com/bikemi.com/gbfs.
```

System

Machine readable basic information about BikeMi

Endpoint: [system_information.json](#) ([Documentation](#))

CURL request

```
curl -H "Client-Identifier: IDENTIFIER" \  
https://gbfs.urbansharing.com/bikemi.com/system_information.json
```

Stations

Information about all stations, including geolocation, addresses and descriptions

Endpoint: [station_information.json](#) ([Documentation](#))

CURL request

```
curl -H "Client-Identifier: IDENTIFIER" \  
https://gbfs.urbansharing.com/bikemi.com/station_information.json
```

Availability

Bike and dock availability

Endpoint: [station_status.json](#) ([Documentation](#))

CURL request

```
curl -H "Client-Identifier: IDENTIFIER" \  
https://gbfs.urbansharing.com/bikemi.com/station_status.json
```

Response
